

i-net Clear Reports for Java Developers

FA-0796 · 1 day

Software Development · Data & Analytics

Introduction

Use i-net Clear Reports, formerly i-net Crystal-Clear, to design and deliver reports in Java applications. This one-day introduction covers the designer, report-server interface and selected operational features using a prepared compatible environment. Browser-based access and supported output formats are used rather than Java browser applets.

Learning outcomes

- Describe report-server and Java application integration options.
- Create and adjust a report template and its layout.
- Use remote-interface reporting, repository access and scheduling features.
- Review permissions, output formats and basic server diagnostics.

Prerequisites

- Programming in Java

Access to a prepared i-net Clear Reports environment and a Java version compatible with the selected product release.

Training outline

1. Report platform and integration

- Introduction and Integration

- Remote Interface

2. Access, ad hoc reporting and repository

- Users and Groups
- Ad Hoc reporting
- Repository

3. Designer and report presentation

- Template Designer
- Dynamic Reports
- Layout Controls
- Permission and Formats

4. Scheduling and diagnostics

- Task Planner
- Server Statistics and Diagnostics
