

SAP S/4Hana

FA-0404 · One Day

Automation, RPA & Power Platform · Mainframe & Enterprise Systems

Introduction

This course is for anyone who uses SAP at work or anyone who wants a high-level understanding of this enterprise software. The syllabus starts with an overview of the system. Then, explore the most common SAP modules and how they support business activities. Eventually this course covers basic SAP navigation from logging in to using transaction codes. This curriculum then moves to demonstrate basic corporate functions like creating sales orders, verifying invoice, executing production, and generating financial statements.

Learning Outcome

By the end of this course, the learner may be expected to know:

- Business processes in SAP S/4HANA
- The most common SAP modules and how they support business activities
- Basic SAP navigation from using transaction codes to automating tasks
- Use SAP corporate functions like creating sales order, verifying invoice, executing production, and generating financial statements
- Professional SAP implementation consultant best practices
